

Project Title: AI Mobile Deal Hunter

Problem Statement:

Many people want to buy a smartphone but don't know:

- Current market price
- Whether the price may drop soon
- Whether they should buy now or wait

So they spend a lot of time searching across different websites.

Goal

To build an AI-powered system that:

1. Accepts a mobile phone name from the user.
2. Searches live information from Google.
3. Analyzes the current market situation.
4. Suggests whether the user should **BUY NOW** or **WAIT**.
5. Sends the result to the user's email.

Nodes Used

1. Form Trigger

- Takes user input.
- User enters:
 - Phone Model
 - Email Address

2. AI Agent

- Acts as the brain of the system.
- Receives user input.
- Makes decisions using AI.

3. Google Gemini Chat Model

- Provides AI reasoning and analysis.
- Generates the recommendation.

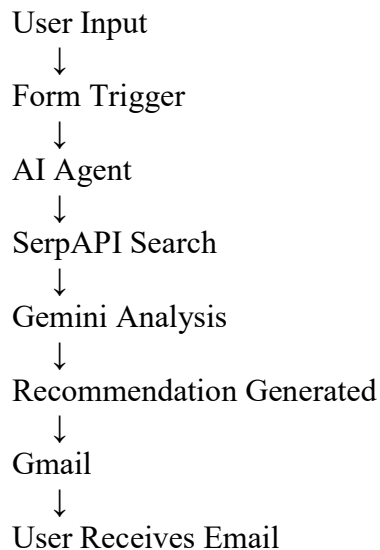

4. SerpAPI Google Search Tool

- Fetches real-time information from Google.
- Gets current price and related information.

5. Gmail Node

- Sends the final recommendation to the user's email.

Workflow

Output Example:

Phone: Samsung S24 Ultra

Current Price: ₹1,10,000

Recommendation: BUY NOW

Reasons:

- Strong AI features

- Premium camera system
- No major price drop expected soon

Conclusion

The AI Mobile Deal Hunter helps users make smarter smartphone purchasing decisions by combining **real-time Google search**, **AI analysis**, and **automatic email notifications** in a single workflow.
